AMENDMENTS TO THE CLAIMS:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Page 9, line 1, before claim 1, replace the single word heading CLAIMS with the following heading:

CLAIMS WHAT IS CLAIMED IS:

- 1. (Currently Amended) Fluid delivery system, in particular for showers, comprising:
- a first conduit $\frac{(22)}{(26)}$ with a terminal section $\frac{(20)}{(20)}$ that flows into at least one opening $\frac{(26)}{(26)}$ for the delivery of a fluid jet in a preferential direction;
 - a light source (52); and
- a second conduit (30) with a terminal section that leads into at least one outlet (28) for the emission of a beam of light produced by the light source (52) and oriented essentially in parallel with the aforementioned preferential direction; and

characterised in that the terminal sections (20,30) of the first and second conduits have at least one common wall (32) which segregates the light beam from the fluid prior to its delivery of the fluid jet.

- 2. (Currently Amended) Fluid delivery system according to claim 1, characterised in that wherein the second conduit (30) runs at least partially inside the first conduit (20).
- 3. (Currently Amended) Fluid delivery system according to claim 2, characterised in that wherein the light source (52) is external to the first conduit (20) and isolated from the fluid.
- 4. (Currently Amended) Fluid delivery system according to claim 1 or 3, characterised in that wherein the at least one opening for the delivery of the fluid jet delivery outlet (26) and the at least one opening for the emission of the beam of light emission outlet (28) are aligned on the a same wall (24) of the fluid delivery system (10).
- 5. (Currently Amended) Fluid delivery system according to claim 4, characterised in that wherein the light source (52) is mounted aligned in alignment with the second conduit (30).
- 6. (Currently Amended) Fluid delivery system according to claim 5, characterised in that wherein the second conduit is tapered and a cross-section of a the tapered second conduit (30) decreases in size in a direction moving away from the an interior

thereof and towards the <u>at least one opening for the emission of</u> light emission outlet (28).

- 7. (Currently Amended) Fluid delivery system according to claim 6, characterised in that wherein the second conduit (30) is delimited by waterproof walls (32) which completely seal and segregate it the second conduit from the an interior of the first conduit (20).
- 8. (Currently Amended) Fluid delivery system according to claim 7, characterised in that wherein the second conduit (30) has at least one clear transparent wall (28, 32).
- 9. (Currently Amended) Fluid delivery system according to claim 1, characterised in that wherein the first and second conduits $\frac{(20,30)}{(50)}$ are mounted on a support $\frac{(16)}{(50)}$ equipped with a fitting
- 10. (Currently Amended) Fluid delivery system, in particular for showers, comprising:

a main hollow chamber (12) with <u>at least</u> one or more openings (26) <u>opening</u> that together form <u>forms</u> a fluid delivery area (24), <u>and</u>

a light source (52) coupled with the main chamber (12), which emits a beam of light that is projected out of the main chamber and originates from a portion (28) of the fluid delivery area in which there are no fluid outlet holes (26).

11. (Currently Amended) Fluid delivery system according to <u>claim</u>

1. wherein any one of the above claims, characterised in that the at least one opening (26) for delivery of the water <u>fluid</u> jet is on a separate component (61), which can be disassembled from the a main supporting portion (16) of the fluid delivery system.
